

HUGO LUIZ

Automation & Integration Engineer — n8n, AI Agents, APIs & Web

Pernambuco, Brazil (UTC-3) · info@netvarstudio.de · netvarstudio.de · [\[LinkedIn URL\]](#)

SUMMARY

I build and ship working systems: automation pipelines, API integrations between tools that were never meant to talk to each other, and fast, SEO-clean web front ends. Seven automation workflows currently running in production on self-hosted infrastructure — lead generation, LLM-based email classification, payment webhooks with real signature verification, and uptime monitoring. A background in animation design and 3D means I also handle the visual layer, which helps when a project needs both the engine and the interface.

CORE SKILLS

Automation & AI — n8n (self-hosted, Docker), workflow orchestration, AI agents, LLM integration (Claude API, prompt engineering), OpenClaw, Zapier/Make equivalents, webhooks, scheduled jobs, error handling

Integrations & Data — REST APIs, OAuth2, Notion API, Gmail API, Stripe & PayPal webhooks, HMAC signature verification, web scraping (Apify), data pipelines, ETL, deduplication logic

Web & Front End — HTML5, CSS3, JavaScript/TypeScript, React, responsive front end, technical & on-page SEO, Core Web Vitals / PageSpeed optimization, WordPress

Backend & Ops — Python, Node.js, Docker, self-hosted deployment, uptime monitoring, GDPR-compliant system design | **Design** — UI/UX, high-conversion web design, 3D modelling, motion graphics

SELECTED WORK

Netvar Studio — end-to-end B2B prospecting pipeline · netvarstudio.de · *in production*

Scheduled scraping of local businesses → automatic technical audit of each prospect's site (PageSpeed API) → email discovery and verification → an LLM classifies the specific problem found and writes the outreach copy in the prospect's language → transactional send → CRM record. Includes deduplication so no prospect is contacted twice, and a domain warm-up ramp (5 → 20/day over four weeks) to protect deliverability. Built to comply with GDPR and German UWG rules — the automation deliberately stops and hands off to a human where the law requires it.

Inbound reply management with LLM routing

A Gmail OAuth2 trigger matches each sender against the CRM, an LLM classifies the reply as positive / negative / ambiguous, and the flow branches: generate a priced proposal draft for review, update CRM status, or escalate to manual handling. Non-customer mail is filtered out before processing, so the pipeline never acts on noise.

Payment webhooks with verified signatures

Stripe (HMAC-SHA256) and PayPal (OAuth + verify-webhook-signature) endpoints implemented and validated in production against both forged and genuine payloads — forged correctly rejected, genuine accepted. Triggers post-payment onboarding: activate customer, welcome email, wait 48h, verify assets arrived, remind if not.

Competitive ad intelligence pipeline (Meta Ads)

An n8n + Apify + LLM flow that sweeps competitor creatives in the Meta Ad Library, extracts parameters, and automatically categorizes copy patterns and sales angles into strategic reports.

Follow-up, reporting, monitoring & 3D web

Time-based follow-up for leads with no reply after 7+ days; daily digest of what the pipeline processed plus the queue needing human action; uptime watchdog every 30 minutes. Separately, a sales page

with interactive 3D elements and complete on-page SEO, reaching a top Google PageSpeed score.

EXPERIENCE

AI Automation Specialist & Web Developer

Automation & AI Sales Agency · 2024 – Present

Commercial automation engineering: advanced n8n and OpenClaw flows for automatic lead qualification, CRM integration, and 24/7 AI-assisted response. Automated scrapers for competitive market intelligence with LLM-generated reporting. High-conversion, SEO-optimized site development with modern front-end architecture and load-speed focus.

3D Designer, Web Designer & Front-End Developer

Independent projects, Tech & Media · 2023 – Present

3D asset creation, dynamic advertising pieces and animation applying composition and visual storytelling fundamentals. UI/UX prototyping and interface styling centred on user experience and conversion. Translating complex layouts into clean, semantic, responsive code.

EDUCATION & CERTIFICATIONS

BA, Animation Design — UnP, Universidade Potiguar (*in progress*)

n8n Academy Level 1 Certification — *in progress, expected August 2026*

EF SET English Certificate, CEFR-aligned — *in progress, expected August 2026*

Anthropic — Claude API & Claude Code developer course — *in progress, expected September 2026*

Google Analytics 4 Certification — *in progress, expected September 2026*

LANGUAGES & HOW I WORK

Portuguese — native · English — advanced / fluent · German — learning (A2/B1)

Delivery by GitHub repository, file, or document, with written handover documentation so the system can be run and maintained without me. Communication in writing. Fixed-scope projects include two revision rounds.
